# CAMPSITE CONSIDERATIONS

Cub Scout camping will be taking place in sites approved by your local council (council camps, local parks, campgrounds), so campsite selection may be limited. That being said, there are still several considerations to keep in mind when laying out your campsite for a pack event.

**Location.** A campsite facing the south or southeast will get more sunlight and generally will be drier than one on the north side of a hill or in the shade of mountains or cliffs. Cold, damp air tends to settle, causing the bottoms of valleys to be cooler and moister than locations a little higher. On the other hand, hilltops and sharp ridges can be very windy, and should be avoided in lightning-prone areas.

**Size and shape.** A good campsite has plenty of space for your tents and enough room to conduct your activities. It should be useable as it is, so you won't need to do any digging or major rock removal to reshape the area. The less rearranging you do, the easier it will be to leave the site exactly as you found it.

**Protection.** Consider the direction of the wind and the direction from which a storm will approach. Is your campsite in the open or is it protected by a hill or a stand of trees? Is there a solitary tree nearby that may attract lightning? Don't camp under dead trees or trees with dead branches that may come down in a storm or light wind. The best campsites are found near small, forested ridges and hills.

**Insects and animals.** Insects and other animals all have their favorite habitats. The best way to avoid mosquitoes and biting flies is to camp away from marshes, bogs, and pools of stagnant water. Breezes also discourage insects, so you might look for an elevated, open campsite. Don't forget to check around for beehives, hornet nests, and ant mounds. Their inhabitants usually won't bother you as long as you leave them alone, but give them plenty of room. The same goes for most animals.

**Ground cover.** Any vegetation covering a campsite will receive a lot of wear and tear. Tents will smother it, sleepers will pack it down, and walkers will bruise it with the soles of their shoes. Some ground cover is tough enough to absorb the abuse, but much of it is not. Whenever you can, make your camp on naturally bare earth, gravelly soil, sand, or on ground covered with pine needles or leaves.

**Drainage.** While you'll want a campsite that is relatively flat, it should slope enough to allow rainwater to run off. On the other hand, you don't want to be in the path of natural drainage. Check uphill from where you're planning to set up your tent to make sure water won't run through your site. **Never camp in a streambed!** Also you want to avoid depressions in the ground, as even shallow ones can collect water in a storm.

**Privacy.** One of the pleasures of camping is being away from crowds and the fast pace of the city life. Select campsites that are out of sight and sound of trails and other campsites. That way you'll have your privacy while you respect the privacy and peace and quiet of other campers.

**Beauty.** The beauty of a campsite often is what first attracts visitors to it. Being able to look out from a tent and see towering mountains, glistening lakes, or miles of canyon land or rolling prairie is part of what camping is all about. Find a campsite that gives you spectacular scenery, but use it only if it is appropriate for every other reason, too. Remember to always leave your campsite better than you found it.

**Tread Lightly!** You can do a lot to protect the wilderness. Try to leave no trace of your visit. Leave no marks along the trail, keep your campsite clean and tidy, and leave it cleaner than you found it. You will preserve a true wilderness character for you and others to enjoy in the future. Be gentle on Mother Nature. Don't harm plants or animals, including insects. Take nothing but pictures; leave nothing but footprints; and kill nothing but time. This philosophy is as appropriate in a county park as it is anywhere else.
